

GDPR, DATA PRIVACY, DATA GOVERNANCE, RESPONSIBLE AI

Using trust as a catalyst for growth, TNP Consultants assists its clients in data management.

TNP Consultants has been assisting its clients for 15 years with their structural transformations (operational, IT, data governance and strategy, regulatory, cybersecurity and data protection).

The extent of our multisectoral experience, with private and public organizations, allows us to intervene today on the whole data value chain, on performance projects, on transformation and compliance by placing digital trust at the center of your concerns.

“A mission performed with professionalism and a rapid appropriation of the subjects and context which was met with satisfaction from all the participants involved”

Private Health Insurance group.

Your concerns

More than ever, data and information are treated like a strategic and wealth asset for organizations.

Organizations are faced with an exponential growth of data and its uses due to the rise of artificial intelligence, cloud computing, connected objects and Web 3.0. Using this data is key to improving its productivity and becoming a leader on its market but data use includes risks for individuals, for the company, and even for society and democracy.

The identification, collection and use of good quality data, data and algorithm governance while respecting data protection laws and ethics rules and still benefitting from the advantages of AI brings real challenges for companies. Nevertheless, the setting up of a holistic and long-lasting approach is the only way to create and keep clients and employees' trust, a key factor for success in any data strategy.

Data protection and governance are opportunities to succeed with the AI transition.

They trust us

AXA • AESIO • LVMH • SOCIETE GENERALE • RENAULT • GROUPE VYV • GOUVERNEMENT POLYNESIE • EDENRED • SWORD • AG2R • CASINO • ELIS • ENEDIS • RTE • LA POSTE • INSERM • GROUPE ROCHER • FERRERO • BOURSORAMA • VINCI ENERGIE • VINTED • WEBHELP • TF1
